I. To find how long the Moon ſhineth.

Example. On the 17 *March* I would know how long the Moon Shineth. The Moon that day is 6 days old: wherefore, find 6 in the firſt Column of this Table, and againſt it you ſhall find 4 ho. 48 m and ſo long doth the M. ſhine.

II. To find the time of the Moons coming to the South.

Example, Upon the 10 of *March*, the Moon being 10 days old: Look for 10 days in the third Column of the Table, and againſt it, in the fourth Column you ſhall find 8 h. 00 m. ſo that the Moon will be South at 8 a Clock at Night.

III. To find the time of the Moons Riſing and Setting.

1 If the Moon be leſs than 15 days old, add the time of her Shining to the time of the Suns Riſing, and the Sum will be the time of the Moons Riſing.

2. If the Moon be above 15 days old, take the quantity of her Shining from the time of the Suns Riſing, and the remainer will be the time of the M. Riſing.

For the Moons Setting.

1. If the Moon be leſs than 15 days old, add the time of her Shining to the time of the Suns-ſetting, and the Sum ſhall be the time of the Moons Riſing.

2. If the Moon be above 15 days old, Subſtract the Shining from the Sun-ſetting, adding 12 hours if need be, and the remainer ſhall be the time of the Moons Setting; *March* 29, the M. will Riſe at 10 h. 49 m and Set at 11 h.

To find the hour of the Night by the Moons Shadow on a Sun dial.

Find at what time the Moon comes to the South as before, which known, mark how much the Shadow upon the Dial wants of 12 which take from the time of the Moons coming to the South, the remainer is the hour of the night. But if the Shadow be paſt 12, add thoſe hours to the coming to the South, and the Sum is the hour of the night.

Example. Upon the Firſt of *April*, the Moon being 13 day old, and comes to the South at 20 h. 24 m. and that night I find the Shadow at 9 h. 30 m. which wants 2 h. and a half of 12, wherefore take 2 h. 30 m. from 10 h. 24 m. and there will remain 7 h. 54 m. for the hour of the night —— But if the Shadow had been 2 h. 30 m. after 12, thoſe added to 10 h. 24 m would make 12 h. 54. m. for the hour of the night.

The Number of Pounds, Yards, Gross, or the like, to be bought or sold.

THis Table will serve for many good purposes, but it is here principally intended for the Chapmans use in Buying or Selling of any Commodity by the Yard, Ell, Pound, Hundred, Gallon, *&c.* And its use is very easie; as by

EXAMPLE I.

At 9 d. the Yard, what will 70 yards come to?

Look for 9 *d.* the head of the Table, and for 70 in the first Row or Column of the same Table, and against 70, and under 9 *d.* you shall find 2 *l.* 12 *s.* 6 *d.* And so much will 70 Yards at 9 *d.* the Yard come to.

Also, *At* 5 d. *the Gallon*, 500 *Gallons will come to* 10 *l.* 8 *s.* 4 *d.*

And so of any other Price, or any other Number.

But if you cannot find your just Price at the head of the Table, nor your just Number on the side, you must then take it out at twice, and adde them together, and the sum shall answer your Question.

EXAMPLE II.

At 7 s. the Dozen of Gloves, what will 78 dozen come to?

	l.	s.
70 Dozen at 7 *s.* comes to	24	10
